CS 410 Project Progress

Questions
1. Which task have been completed?
2. Which tasks are pending?
3. Are you facing any challenges?

Which tasks have been completed?
The only task I have completed right now is retrieving the data. I have started on writing the parser, but have yet to complete that yet.

Which tasks are pending?
I still need to finish writing the parser, write test cases and then calculate the statistics based on the data obtained from the text. I also need to do any other details associated with the project, like source code documentation covering how to use the software.

Are you facing any challenges?
I am facing some challenges. There are many edge cases I didn't consider at first with this project, but I am working through them. Overall I am feeling pretty good about my progress, so far and I am not too worried about challenges in the future.
